Report of Digital literacy

CSE0001: Digital Literacy
Name of the Student: Dhanya Srivastava
Registration Number: 25BAI10791
Slot: F12
Semester: 2

Task 1	**Create a Digital Literacy Awareness Infographic**
Task 2	**Build Your Student Digital Portfolio**
Task 3	**Explore Coding & Collaboration Platforms**
Task 4	**Draft a Professional Email & Etiquette Guide**
Task 5	**Cybercrime Awareness Case Study & Prevention Guide**

Task 1: Create a Digital Literacy Awareness Infographic

As the Student Digital Ambassador, you need to create a one-page visual resource that helps your batchmates understand what Digital Literacy means and why it matters.

I created this **infographic using Canva**, a digital tool, to clearly explain the concept of digital literacy. The design covers important topics such as the definition of digital literacy, helpful digital tools for students, safe internet habits, and maintaining a professional online presence. Each part of the infographic is **well-organized with headings, bullet points, and visual elements** to make the information easy to follow and visually appealing. I used a consistent color scheme and background to improve readability and give the design a polished, professional look.

One of the most interesting parts of this project was figuring out how to present a **lot of information in a clear and structured way.**

It was a bit challenging to **balance text and design**, as too much content could make the infographic look messy. Choosing the right icons, layout, and formatting needed careful thought. Overall, this project helped me **improve my digital design skills and strengthened my ability** to convey information effectively through visuals.

Task 2 - Build your student Digital Portfolio

A professional digital presence is no longer optional — it is expected. In this task, you will set up your foundational portfolio across the key platforms that employers, internship coordinators, and the academic community check.

As part of this task, I set up accounts on **GitHub and LinkedIn**, two important platforms for creating a **solid digital and professional profile**. GitHub is a popular tool among developers for **storing, organizing, and working together** on code through projects called **repositories**. It also acts as a portfolio where people can display their coding abilities and the projects they've worked on. LinkedIn, meanwhile, is a **professional networking site** that lets users connect with colleagues, industry professionals, and job recruiters, while also providing a space to share their accomplishments, skills, and work experience.

In the next four years, I plan to regularly use GitHub to upload my **academic and personal projects**, particularly in fields like Artificial Intelligence and Machine Learning, and to take part in open-source projects to get hands-on experience.

At the same time, I will use LinkedIn to build a **professional network**, keep up with industry news, and share my learning progress, certifications, and successes. By actively engaging with these platforms, I hope to improve both my **technical skills and professional growth**, helping me become more ready for future career chances.

Task 3 - Explore Coding & Collaboration Platforms

As a Digital Ambassador, you need to be able to guide your peers toward the right online tools for studying, practising, and collaborating. This task builds familiarity with two categories: coding practice platforms and cloud collaboration tools.

Part A – Coding Practice:

For this task, I set up an account on **HackerRank**, which is a well-known website for learning and practicing programming. I worked on a **beginner-level challenge called "Solve Me First"** from the **Python** introduction section. This exercise helped me get familiar with basic input and output operations as well as simple ways to approach and solve problems in Python.

During this activity, I focused on writing **clear and logical code**, which is important for building a solid base in programming.

HackerRank offers structured challenges that get harder as you progress, making it easier for someone new like me to improve over time. I also got to know features like submitting code, getting scores, and receiving feedback, which allowed me to track how I was doing.

Using platforms like HackerRank will be very helpful for my studies in the next four years.

It will help me **improve my coding abilities**, prepare for technical interviews, and sharpen my problem-solving skills. Regular practice on such platforms will also **increase my confidence in programming** and make me more successful in my coursework, personal projects, and competitive coding situations.

Part B – Google Workspace Collaboration:

For this task, I used platforms like **Google Forms and GitHub**. I built a **"Digital Literacy Awareness Quiz"** using Google Forms to assess basic knowledge on **online safety, password security, and digital tools.** The quiz had multiple-choice, checkbox, and short-answer questions to make it engaging and informative. I also looked into features such as adding an answer key, assigning points, and linking the form to Google Sheets for automatic data gathering and analysis.

In addition, I shared the **form link and screenshots of both the quiz and its response sheet in my GitHub repository** as required. This helped me learn how to properly document and present my work in a professional manner. These tools will be really helpful for my studies. Google Forms can be used for **creating surveys, quizzes, and collecting data for various projects**, while GitHub will assist me in managing my code, working with others, and displaying my work. Overall, this task helped me improve my digital skills and introduced me to useful platforms that I can use for my future academic and career goals.

Task 4 - Draft a Professional Email & Etiquette Guide

As a Digital Ambassador, one of your responsibilities is teaching your peers how to communicate professionally online. This task tests whether you can apply email etiquette yourself, and whether you can communicate those rules clearly to others.

Part A – Write two professional emails:

– Attached under Task 4 folder

Part B – Create a Social Media Do's and Don'ts checklist:

Responsible Social Media Use Checklist (for College Students)

✔️ Do's

- Use **strong and unique passwords** for your accounts.
- **Think before posting**—ensure your content is respectful and appropriate.
- Verify information before sharing to **avoid spreading misinformation.**
- **Adjust privacy settings** to control who can see your posts.
- Use social media for **learning, networking, and skill-building.**

❌ Dont's

- **Don't share personal or sensitive information** (address, phone number, passwords).
- Don't engage in **cyberbullying, trolling, or harmful comments.**
- Don't believe or **forward fake news** without checking sources.
- Don't spend **excessive time scrolling**—maintain a healthy balance.
- **Don't post content that could harm your reputation or future career.**

Report Summary:

Poor digital communication can cause big misunderstandings. For instance, a student working on a group project sent a brief message saying, "I'll handle the report," thinking the others would take care of the presentation slides. But the rest of the team took that to mean the student was responsible for the whole project. As a result, **no one made the slides, and the group turned in an incomplete assignment, which hurt everyone's grades**. This situation could have been avoided with better communication.

The student should have clearly stated exactly what they were taking on and what others needed to do. Using more detailed messages, **checking in to confirm responsibilities**, and maybe creating a shared list of tasks would have made sure everyone knew their part and stopped the problem from happening.

Task 5 - Cybercrime Awareness Case Study & Prevention Guide

As a Digital Ambassador, you are expected to help your peers recognize and avoid online threats. This task requires you to research a real or realistic cybercrime scenario and produce an awareness resource.

During my research on **phishing attacks**, one thing that really surprised me was how well **cybercriminals** can copy trusted platforms like **banks and UPI apps**. The fake emails, messages, and websites they create are so detailed that they look almost real. I also learned that **phishing attacks mostly rely on human behavior**—like using fear, urgency, and trust—rather than technical weaknesses. This means even people who know a lot about security can still get targeted.

What really stood out was how fast things can go wrong. Just one wrong move, like clicking a **bad link or sharing an OTP**, can lead to big problems like losing money or having your **identity stolen**, and it's hard to get things back once they're gone. This shows how important it is to stay careful whenever you're online.

Because of this research, I'm going to be more careful. **I'll check links before I click, not respond to messages that seem too urgent or suspicious**, and never share anything sensitive like passwords or OTPs. These habits will help me stay safer and more responsible while using the internet.
